Brown Opinion Project: December 2021 Poll Results

Methodology

The Brown Opinion Project (BOP) conducted its December 2021 poll from December 2–3. To ensure a representative sample, BOP solicited responses from Brown undergraduate students as they exited Covid–19 testing locations at Alumnae Hall and Andrews House. Because all undergraduates were required to be tested on day one and day five after returning from Thanksgiving break, we believe this was the most effective way of generating a representative sample. BOP representatives spent 14 hours soliciting responses at Alumnae Hall and 10 hours at Andrews House. BOP representatives asked every person who exited the testing location if they were interested in taking a quick anonymous poll. Responses were anonymously collected using Google Forms. Over the course of the polling process, we collected 488 total responses from Brown undergraduate students. The margin of error is 4.44% with 95% confidence.

Self-reported Demographic Information

The sample of undergraduate students who took the poll is demographically similar to the Brown undergraduate student population. First-years made up 27.05% of the sample, sophomores 25.61%, juniors 23.77%, and seniors 22.95%, while 0.61% preferred not to indicate their class year.¹ The sample was 54.10% female, 42.42% male, 2.05% non-binary, while 1.43% preferred not to indicate their gender. Additionally, 60.25% of respondents identified as white, 27.87% as Asian, 13.52% as Black, 6.76% as non-white Hispanic, 0.41% as Native Hawaiian/Pacific Islander, 1.43% as American Indian/Alaska Native, while 2.46% of respondents preferred not to indicate their race. The percentages for race add up to more than 100 percent because some respondents selected more than one race/ethnicity. Students also indicated their (intended)
